

**KC BERRY**

**M I C R O C E M E N T**

**EBOOK**

**M**icrocement is ideal for remodeling and transform environments, allows to coat those old tiles without removing them, thus avoiding all the usual disorder of conventional works. Benefits of Microcement: Resistance, fully waterproof, high degree of customization, various colours available, the remodeling is quick and easy, doesn't cause debris, highly resistant to UV rays and can be applied to any non-deformable surface (except Wood).

**M**icrocement KC Sealer applied in two or three coats, make Microcement scratch, shock, stain and wear resistant. The cleaning and maintenance will determine the durability of the materials.

**M**aintenance of Microcement is very simple, water and neutral soap or products with neutral pH. Don't use abrasive or corrosive products. For this maintenance the use of any machinery isn't necessary since all these products can be applied to the mop.

# MEET OUR MICROCEMENT FINISHES

## MICROCEMENT FINISHING

This microcement, was made to be a silky finish this coating is very pleasant to the touch, when used for coating walls, it may sometimes be confused with stucco, but the finishing of this kind of Microcement is more natural because the design is not repeatable and doesn't follow a visible structure.

## MICROCEMENT TRAFFIC

Microtraffic has a natural look, which makes it a coating of elegance and that will hardly go unnoticed. The Microcement has a high level of customization and is fairly easy to combine with other materials. You may prefer, for a given floor, a satin finish or a more glossy finish. This type of Microcement also features about 40 different colours.

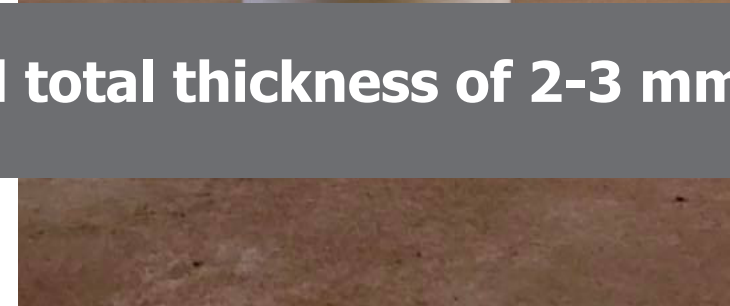

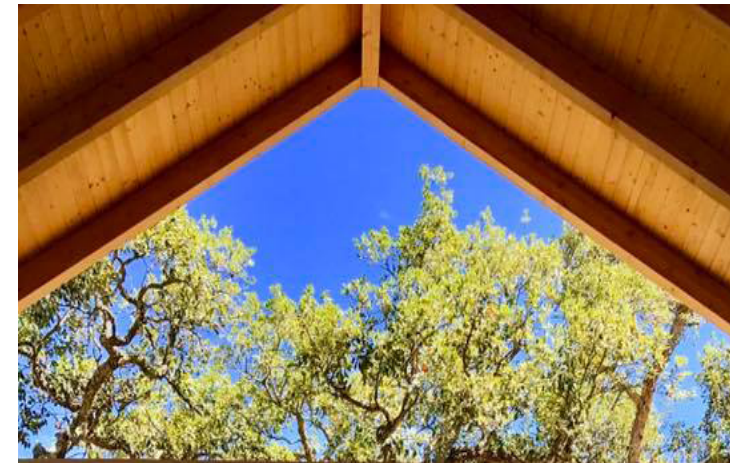

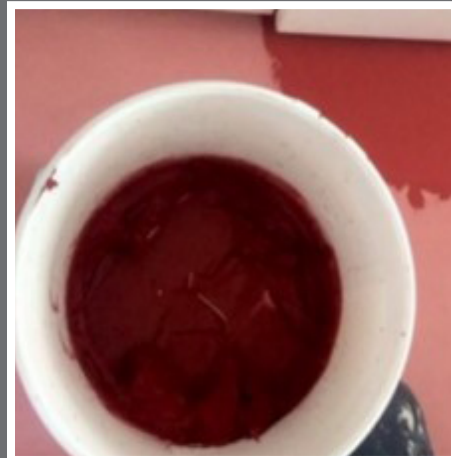

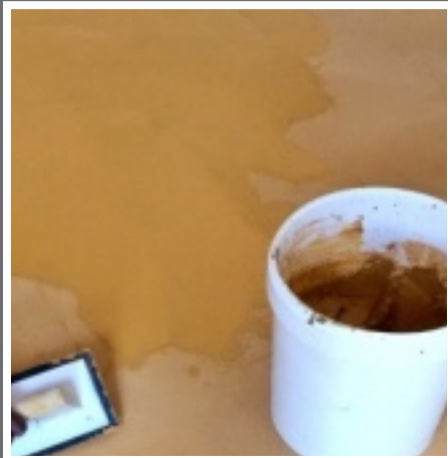

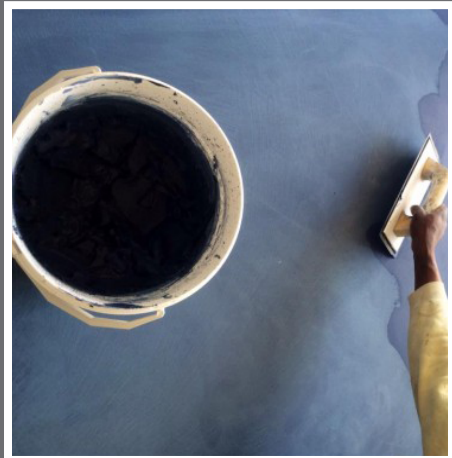

## MICROCEMENT NOSLIP

The MicroNoslip is non-slip and durable, features that make it ideal to outdoor spaces, like terraces, porches or even facades. This type of Microcement is undoubtedly one material to keep in mind when designing pleasant surroundings and well decorated spaces.

It is recommended total thickness of 2-3 mm

## Can be applied to:

### Interior

### Exterior

- Walls
- Floors

KCBERRY Microcement have created a wide range of [topcoat microcement varieties](#):

## Waterproof & Stainless

These are examples of several types of Microcement depending on the surfaces to which they are intended:

- MicroBase – Preparation Coating
- MicroFinishing – Wall
- MicroTraffic – Floor
- MicroNoslip – Exterior Floor
- Poolciment – Pools

**K**CBERRY Microcement is a continuous coating bicomponent, Microcement powder and Resin, mixing these two elements results in a uniform mortar which can be applied in any non-deformable surface – Floor, Walls, Ceiling, Stairs, Countertops, Shower Trays, Pools and Garages. The Microcement should be applied by qualified professionals.

This is a single and continuous coat, without expansion joints since it's able to achieve a balance between hardness and flexibility in a pavement with these characteristics.

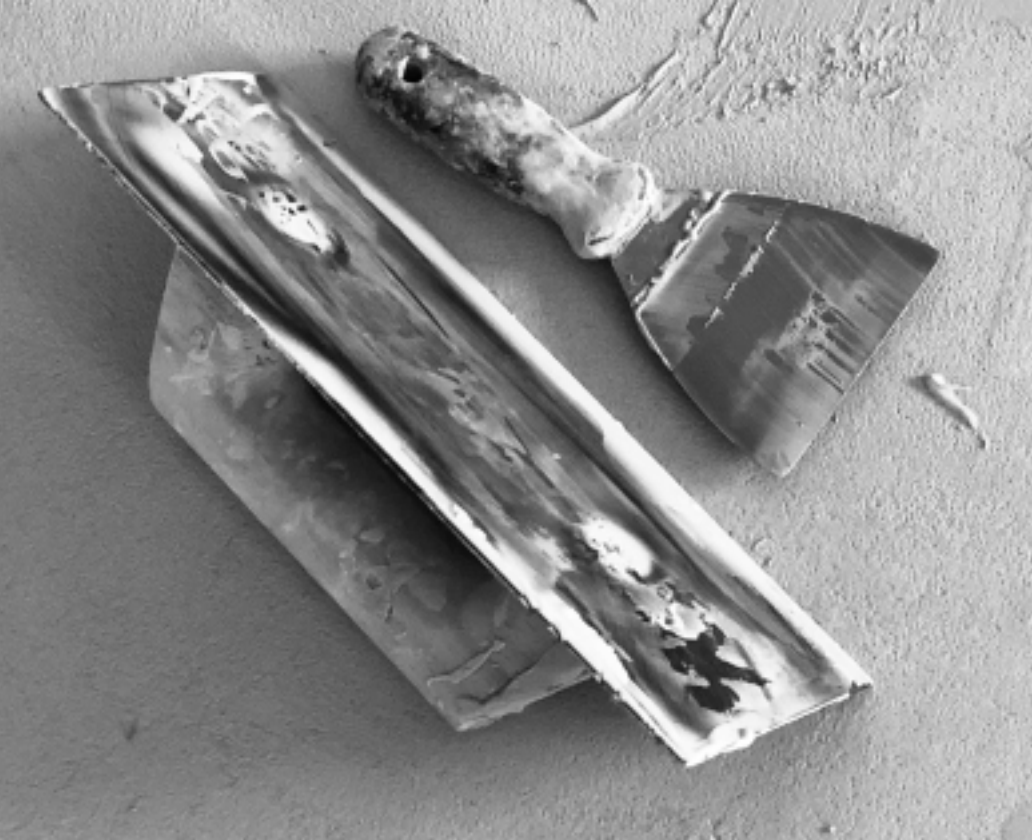

## Give a special touch to your premises.

We can achieve a high level of finish with Microcement depending on the existing and desired surface by the customer without ever losing its unique properties that characterized it. In the floors it's recommended a more polished and smooth surface while the wall can reach more rustic effect if not sanded so carefully. The seal is obtained by using matt, satin or gloss Bicomponent Polyurethane.

**40 available colours** and 3 sealer finishes (Matt, Satin & Gloss)

**M**icrocement allows coating large floors, walls and ceilings without joints. Thanks to its finish and wide range of colours, Microcement helps to create unique spaces.
